

## **APL Case Study**

Project: **Tobacco Dock** Date: **2021** 

Background:

- The existing cladding had been identified as being combustible ACM
- APL had previously designed and supplied a bespoke StrongBak<sup>™</sup> structural-framing solution to the project due to its unique historical structural design
- APL were engaged to supply and design additional areas of StrongBak<sup>™</sup> along with a complete A1-rated face-fixed flat-panel façade to replace non-compliant cladding (not supplied by APL)
- APL Armacoil<sup>™</sup>PLUS-HT material was selected due to its exceptional performance in a marine environment
- APL's fabrication capability meant that all panels were factory-drilled leading to significantly quicker installation time on site

Systems:

- 4,000m<sup>2</sup> of APL Slimwall<sup>™</sup>-FF face-fixed flat panel in 2mm aluminium with an Armacoil<sup>™</sup>PLUS-HT coating in RAL 1003
- APL Tritherm<sup>™</sup> sub-framing for StrongBak<sup>™</sup> area
- APL aluminium AluE<sup>™</sup> Tritherm<sup>™</sup> helping hand brackets and extrusions to support panel system onto StrongBak<sup>™</sup>
- All flashings, fixings and accessories

## **Building Location:**

• Liverpool
